

KARELSKOE LETO

We offers products from a unique region of Northern Europe – the Republic of Karelia, where large areas of taiga forests have been preserved, and wild berries grow in abundance such as fen-berry, lingonberry, bilberry, cranberry, sea-buckthorn.

Our unique production technology allows us to preserve the juice ingredients, vitamins, dietary fiber and pectin. For example, anthocyanins in bilberries or organic acids in cloudberries makes our product a market leader.

20 years in
the Russian
and foreign
markets

A network of
Russian
consumers from
Murmansk to
Tomsk

Foreign
buyers from
Sweden to
Japan

In 2019, we started bottling the berry drink base in doypack packaging for sale through retail chains. We signed contracts with such federal networks as Perekrestok, Vkusvill, and Azbuka Vkusa.

In 2022, a new production line was launched, it doesn't have analogues in the North-Western region, which made it possible to significantly expand production volumes.

BERRY DRINK BASE

We offer a completely **natural berry drink base**, made from selected wild berries on modern equipment without the use of artificial dyes and preservatives (cold and hot extraction). Berries grated with sugar are cooked in specially softened water. The product reserves all the useful properties, taste and smell of fresh berries, does not contain seeds and has a smooth paste.

Berry drink base in aseptic bag

Available range: bilberry, wild cranberry, lingonberry, sea buckthorn, fen-berry, cherry, black currant, raspberry

Ingredients: natural berry, sugar (or glucose-fructose syrup)
