

Production of log houses

Coziness tailored to your needs

About the TEREM company

Our main activity is the **manufacturing of log houses with a unique design, as well as saunas, gazebos, furniture and decorative elements**, including those made from dry (deadwood) polar pine Kelo.

Quantitative, qualitative and technical characteristics are agreed on **individually** for each project.

Over 20+ years of work, we have built hundreds of houses in Russia and abroad. Our extensive experience, skillful use of advanced technologies of wooden house construction, and implementation of the control system allow us to maintain the quality of our log houses consistently high.

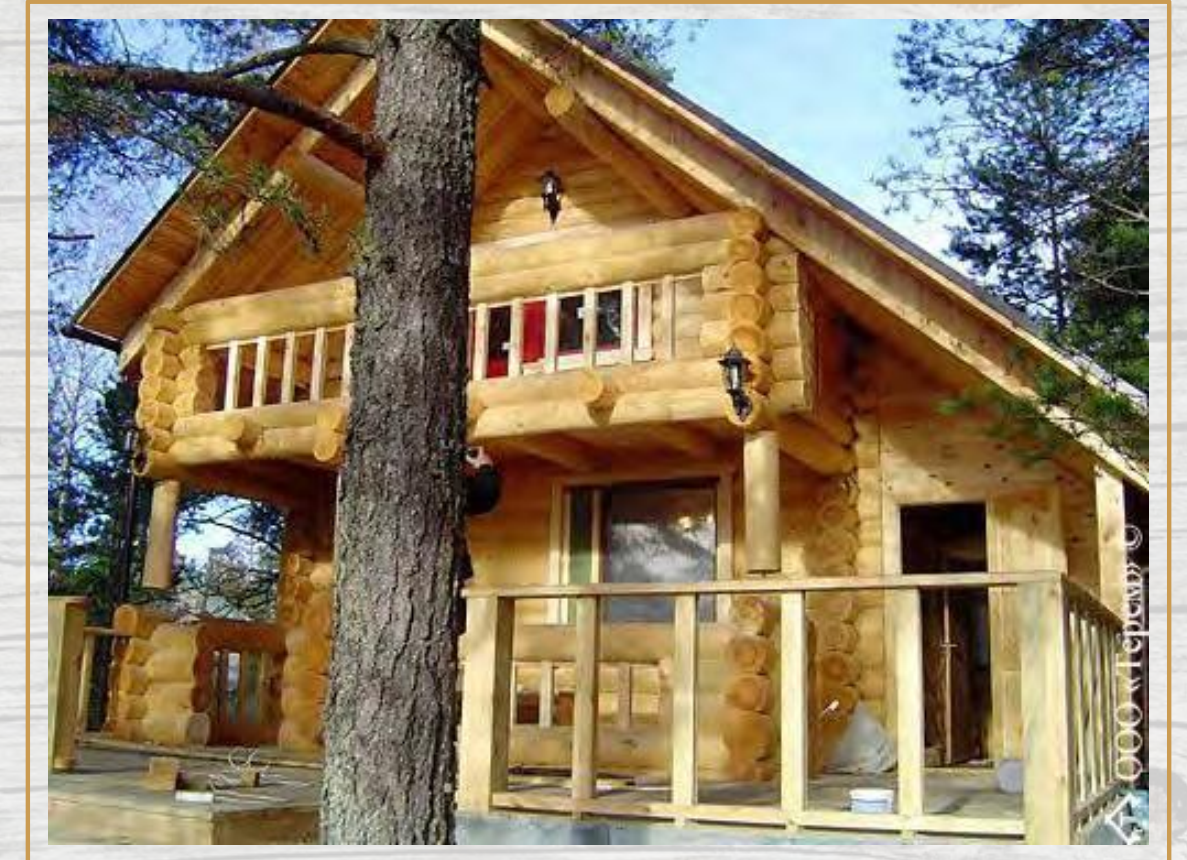

Our highly qualified craftsmen are proficient in Russian, Norwegian, and Canadian logging technologies and work year-round at the enterprise's site and construction sites.

The Russian region of Karelia, with an impressive stock of coniferous forests, is a major wood supplier and processor. Proximity to the source allows us to build wooden houses from the best raw materials and large- diameter logs.

Our projects

Unique polar pine Kelo

Eco pine Kelo is a tree that dries upright for decades.

Kelo is harvested in limited quantities in the north of Russia, in the Republic of Karelia.

Kelo pine has a unique texture and does not require heat or other treatment, as well as additional sanding or painting. This makes it an environmentally friendly product in the wooden housing construction market.

Kelo pine is one of the most durable types of wood.

This material is luxurious and unique not only for construction but also for interior design, decoration and other purposes.

A little more about the Kelo pine

Everlasting beauty: Kelo wood has stunning aesthetics. The preserved material has a bright silver hue with unique textures, patterns and spots that tell the story of its longevity.

Exceptional durability: Kelo wood is unsurpassed in its durability due to the unique preservation process it undergoes naturally. Kelo wood is highly resistant to rotting, insects and fungi, making it a popular choice for constructions built in harsh environmental conditions.

Natural thermal insulation and energy efficiency: Kelo wood has excellent thermal insulation properties, which makes it an ideal construction material. It effectively retains heat in rooms during the cold months and maintains a comfortable environment during the summer heat. These thermal insulation properties help improve energy efficiency and, as a result, reduce energy consumption and costs.

Cooperation with TEREM

Having successfully worked in the domestic market of Russia and with foreign clients, our company is ready to expand its export activities and invites foreign partners to cooperate!

Potential partners: partner companies, distributors, partner designers, individuals, construction companies, representatives of the tourism industry (hotels, eco-villages) and everyone who would like to become the owner of unique products made from Karelian wood.

Participation in international exhibitions in 2024

March 2024: **WoodShow Dubai, UAE**

April 2024: **China Import and Export Fair, China**

June 2024: **India Wood, India**

Cooperation with TEREM

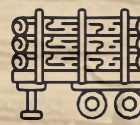

We work on individual projects

Export delivery price: from 15,000 Euro per object (the cost of the object shall be calculated individually)

Supply volume: any

Delivery times and frequency: to be discussed individually

Certification: not required, phytosanitary certificates can be obtained (if necessary)

Possible payment terms: prepayment

After-sales/warranty service: negotiated individually

Quality control at all stages of work

Instruction on house assembly or team visit (if necessary)
